
SCITI 2026

Executive Summary

Smart City Thailand Index — Reality, not ribbon-cutting.

Digital Economy Promotion Agency (depa)

Ministry of Digital Economy and Society (MDES)

Kingdom of Thailand

April 2026 | SCITI-2026-ES

Pronounced "City" (silent S, like Latin)

The Problem

Thailand has certified 37 smart cities across 4 batches since 2019. The program created real momentum — frameworks, international partnerships, and a national vision. But certification measures plans, not outcomes. When we went to the field, fewer than 10 certified cities had operational smart infrastructure that citizens could actually feel.

The Response

SCITI (Smart City Thailand Index) is the first transparent, outcome-based assessment of Thai smart cities. It scores 118 cities on what is actually built and operational — not what was presented on a slide deck. The methodology uses 7 weighted pillars scored 0-100 from 15+ verifiable public data sources.

Key Numbers

Top 5 Cities

- #1 **Phuket** — 72.8/100 — *Tourism engine, real tech*
- #2 **Samyan** — 72.4/100 — *Innovation district, alive*
- #3 **Chiang Mai** — 71.1/100 — *Heritage meets sensors*
- #4 **Khon Kaen** — 70.2/100 — *Isan's real deal*
- #5 **CMU Smart City** — 70.1/100 — *Campus as living lab*

Scoring Formula

Composite = $\text{Sum}(\text{Pillar} \times \text{Weight}) / \text{Sum}(\text{Weights})$

Livability 25% | Economy 20% | Safety 15% | Wellbeing 15% | Environment 10% | Hospitality 10% | Digital 5%

Alpha $\geq$ 65 (operational) | Beta 45-64 (building) | Gamma $<$ 45 (planning)

What Makes SCITI Different

- We measure reality, not plans. Field verification, not paperwork.
 - Every score is traceable to a public data source.
 - Financial toolkit: 15 instruments matched to each city's tier and gaps.
 - Bankability assessment: revenue base, institutional capacity, private interest.
 - City context: livelihood, opportunities, and the catch — tailored per city.
 - Data published under CC BY 4.0. Fully auditable.
